

Eamonn F. Healy – CURRICULUM VITAE

a. Professional Preparation

University College Cork, Ireland,	1976-1980	B.S. Chemistry.
University of Texas at Austin,	1980-1984	Ph.D. Chemistry.

b. Appointments

2010-	Bro. Lucian Blersch Professor of Science
2001-	Professor of Chemistry, St. Edward's University
1995-2001	Associate Professor of Chemistry, St. Edward's University
1990-1995	Assistant Professor of Chemistry, St. Edward's University
1986-1990	Research Scientist Associate IV, University of Texas at Austin
1984-1986	Postdoctoral Research Fellow, University of Texas at Austin

c. Honors and Professional memberships

Bro. Lucian Blersch Professor of Science
Charter F21 member, Class of 1995, Project Kaleidoscope
Member, the American Chemical Society
Member, Texas Academy of Science
Original Member, Highly Cited Researchers Database, ISI Thomson Scientific.
Piper Professor (Texas): 2001
Outstanding Teacher, St. Edward's University (1999)
Nominee, CASE Teaching Award (1999)
Outstanding Teacher, School of Natural Sciences, St. Edward's University (1992)

d. Research

The general focus of my research involves the use of molecular modeling to design structure-activity probes for the purpose of elucidating enzymatic activity. Recent targets have included HIV-1 integrase, the c-Kit and src-abl proteins associated with tumor development and certain leukemias, and the metalloproteinases associated with the shedding of chemokine CXCL16. For the latter work we have used ligand-protein docking to guide and characterize in vitro assays of CXCL16 shedding. We have also investigated the bacterial and host contributions to latent Mtb infection through the identification of the macrophage cellular responses that are modulated by the Mtb alpha-crystallin (Acr) protein. This work has allowed for an in silico characterization of the mechanism of action of Mtb Acr, that in turn has led us to a novel mechanism of action for all small Heat Shock Proteins (sHSP). More recently we have expanded this analysis to characterize mechanistic details for the heat shock response of Escherichia coli, and we have developed a model to explain the observed suppression of spinocerebellar ataxia by human alphaB-crystallin through the formation of a transient complex. A transient, non-obligate oligomer model has also been developed to explain aspects of the etiology of Amyotrophic Lateral Sclerosis or ALS.

e. Teaching

Fall/Spring:

CHEM 2323 : Organic Chemistry I (<http://www.cs.stedwards.edu/chem/Chemistry/CHEM29/CHEM29/text29.html>)
CHEM 3325 : Organic Chemistry II (<http://www.cs.stedwards.edu/chem/Chemistry/CHEM30/text30.html>)

CHEM 4341 : Forensic Chemistry (<http://www.cs.stedwards.edu/chem/Chemistry/CHEM4341/text4331.html>)
CHEM 4343 : Biochemistry I (<http://www.cs.stedwards.edu/chem/Chemistry/CHEM43/CHEM43/text43.html>)
CHEM 4245 : Biochemistry Lab (<http://www.cs.stedwards.edu/chem/Chemistry/CHEM45/text4245.html>)

Elective:

HONS 4345 : Science, Technology and Society
SCI 2320 : Science in Perspective
CHEM 4320 : Advanced Organic
CHEM 4344 : Biochemistry II
